Product Line Update - 2017 Refinement

With the drive to further synchronize our focus on product R&D and our vision to create innovative, all-new LED lighting solutions for interior and exterior spaces, we have completed an extensive review of our full product line and will be discontinuing several of our older fixture designs and replacing them with brand new solutions to rationalize our offering in each category to a few key luminaires.

This will refine our product line and enable our engineering team to drive forward with the development of several next-generation designs that are currently in the pipeline, delivering more efficient and higher quality LED luminaires than ever before.

As of today, we are announcing the discontinuation of the below products. We will continue to support any open orders for these products and will continue to take orders on these items until April 1, 2017. After this 60-day grace period, these products will be fully discontinued, removed from the website, and new orders will not be accepted.

INDOOR LIGHTING

BEAM-LED (Replaced with Vector; Coming Soon)
CUBE-LED (Replaced with Vector Cube; Coming Soon)
